Exciting technologies for API developers worldwide 2020

Published by [Lionel Sujay Vailshery](#), Feb 21, 2022

Close to half of the respondents working with application programming interfaces (APIs) said that microservices were the most exciting technologies for them in the next year, according to a 2020 state of the API survey. An API is a software intermediary that enables applications to interact with each other. An API can be a web-based system, database system, etc.

Most exciting technologies for people working with application programming interfaces (APIs) worldwide as of 2020
